

Report No.: FLSHF000101720002 Page 1 of 3

Applicant : Maanshan Tong-Jie-Liang Biomaterials Co.,Ltd

Address : No.2196 HongQiNanLu, Maanshan economic and technological development zone

Report on the submitted sample(s) said to be:

Sample Name : PLA SPUNLACE NONWOVEN FABRIC FOR SANITARY

Model No. : TJL-N30605

Manufacturer : Maanshan Tong-Jie-Liang Biomaterials Co.,Ltd

Sample Quantity : 50g Sample Status : Solid

Sample Received Date : Jun.05, 2013

Sample Tested Date : Jun.05, 2013- Jun.21, 2013

**Test Requested:** As specified by client, in accordance with GB/T 20944.3-2008 Textiles

-Evaluation for antibacterial activity Part 3:Shake flask method

**Test Component(s):** PLA SPUNLACE NONWOVEN FABRIC FOR SANITARY

**Test Item(s):** Please refer to the following page(s).

**Test Method:** Please refer to the following page(s).

**Test Result(s):** Please refer to the following page(s).

## **Test Report**

Report No.: FLSHF000101720002 Page 2 of 3

## Test Method:

With reference to GB/T 20944.3-2008 Textiles-Evaluation for antibacterial activity-Part 3: Shake flask method

Test Organisms:

Staphylococcus aureus (ATCC 6538)

Escherichia coliform (ATCC 8739)

Candida albicans (ATCC 10231)

### Test Result:

#### 1. Test effectiveness:

For *Staphylococcus aureus* and *Escherichia coliform*, when the value of microorganism growth  $\geq$  1.5; for *Candida albicans*, when the value of microorganism growth  $\geq$  0.7, and the concentration of microorganisms in reference flask after inoculation increased, the testing is effective. Otherwise, the testing must be conducted again.

## $F = lgW_t - lgW_0$

F - the value of microorganism growth on controlled sample;

 $\mathbf{W_t}$  - the average value of microorganisms after inoculation and vibrating 18 hours on 3 controlled samples;

W<sub>0</sub> - the average value of microorganisms after inoculation immediately on 3 controlled samples;

#### 2. Calculation for bacteriostatic rate:

Bacteriostatic rate =  $(W_t-Q_t)/W_t \times 100\%$ 

 $\mathbf{Q}_{t}$  - the average value of microorganisms after inoculation and vibrating 18 hours on 3 test samples.

#### 3. Result:

Test Organisms	Inoculation concentration (CFU/ml)	W <sub>0</sub> (CFU/ml)	W <sub>t</sub> (CFU/ml)	Q <sub>t</sub> (CFU/ml)	F	Bacteriostatic rate (%)
Staphylococcus aureus	$3.6 \times 10^{5}$	$2.4 \times 10^4$	$1.3 \times 10^6$	$6.0 \times 10^4$	1.7	95
Escherichia coliform	$3.6 \times 10^{5}$	$2.4 \times 10^4$	$1.5 \times 10^6$	$7.1 \times 10^4$	1.8	95
Candida albicans	$2.6 \times 10^{5}$	$1.8 \times 10^4$	$1.5 \times 10^{5}$	$4.8 \times 10^{3}$	0.9	92

## **Evaluation for antibacterial activity:**

When bacteriostatic rate to *Staphylococcus aureus* and *Escherichia coliform* is not less than 70%, or bacteriostatic rate to *Candida albicans* is not less than 60%, the antibacterial activity for sample submitted is acceptable.
